

Mobile Electric Power (MEP) Generator

DESCRIPTION

Mobile Electric Power (MEP) generators are skid or trailer mounted and are diesel engine powered. The current family of military standard generators was manufactured 24 years ago. We are currently fielding the replacement Tactical Quiet Generators (TQGs). The updated TQGs feature an enhanced noise suppression capability, reduced O&M costs, and EPA compliance for emissions. The Mobile Electric Power program is a rollup of several generators ranging in size from 3KW to 100KW output.

PROCUREMENT PROFILE:	FY00	FY01
<i>Quantity:</i>	<i>457</i>	<i>Various</i>

OPERATIONAL IMPACT

Power Equipment is operationally linked with any information system, weapons system, or equipment requiring electrical power. C4I systems are increasing as technology continues to advance, which increases the demand for Tactical Quiet Generators. The readiness of supported systems and equipment is directly affected by the readiness of power equipment.

PROGRAM STATUS

This is a Joint DoD program. DoD provides all branches of service with the necessary research, development, and program management and contract vehicles. USMC funds are for procurement only.

DEVELOPER/MANUFACTURER

Fermont Corporation, Bridgeport, CT

MC II, Dallas, TX
