

# ➤ Joint Network Management System (JNMS)

## DESCRIPTION

The JNMS is a suite of government and commercial-off-the-shelf (GOTS/COTS) software applications that have been integrated to provide a standard, interoperable communications planning and network management system for the components in a joint task force. Its mission is to facilitate high-level communications planning (war planning); detailed planning and engineering; monitoring; control and reconfiguration; spectrum planning and management; and the security of transmission systems, data networks, voice switching and messaging systems.

## OPERATIONAL IMPACT

The program will meet a joint requirement and improve communications planning by Marine forces participating in joint operations or exercises.

## PROGRAM STATUS

JNMS is a joint (U.S. Army lead) program, currently in system development and demonstration. Joint initial operating capability is scheduled for mid-FY 2004.
