

NAVY-MARINE CORPS INTRANET

The Navy-Marine Corps Intranet (NMCI) network facilitates the evolution of Marine Corps network-centric operations and garrison e-business operations. Marine Corps participation in the NMCI services contract provides for the delivery of a single, integrated, department-wide shore-based network with comprehensive end-to-end data, video, and voice information services.

NMCI is a partnership between the Department of the Navy, the Department of Defense and industry. This partnership should produce many benefits for the Marine Corps, to include improved hardware and infrastructure support, advances

in legacy application reduction and data consolidations, improved cost identification and network security.

Through coordination with the Marine Corps Network Operations and Security Command (MCNOSC), NMCI will augment the Marine Corps Enterprise Network (MCEN) operations capability and help provide secure, accurate and timely exchange of information between deployed and ashore forces. The Marine Corps looks forward to realizing the effectiveness and efficiencies offered by an interoperable department-wide ashore network developed in partnership with innovative industry leaders.
